

Farm Hill Boulevard

Pilot Street Improvement Project

Redwood City's vision is for a safe, healthy, sustainable community. The overarching transportation goal is to establish a balanced, multi-modal transportation network that gets us where we want to go safely and minimizes environmental and neighborhood impacts.

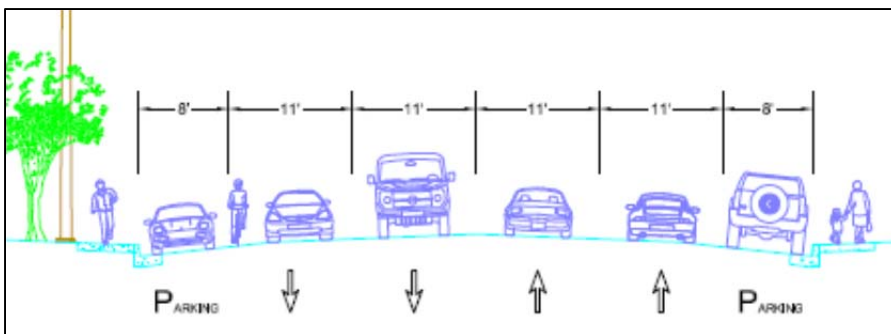

Pilot purpose: Evaluate whether reconfiguring the existing four traffic lanes on Farm Hill Boulevard and Jefferson Avenue increases safety and improves livability for the residents, visitors, and employees of our community.

Where: Farm Hill Boulevard from the western city limit (below Cañada College) to Jefferson Avenue and Jefferson Avenue from Farm Hill Boulevard to Alameda de las Pulgas. No changes would be made to the Alameda de las Pulgas intersection.

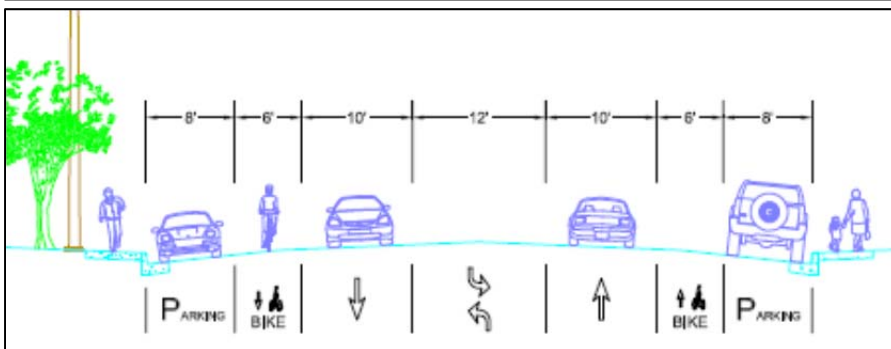

What: The pilot would remove the existing lane markings and replace them with painted (temporary) lane marking in the new configuration. Data would be collected before and after the changes are made to determine if the project meets the community's goals.

Questions or Comments? Contact Jessica Manzi at jmanzi@redwoodcity.org or (650)780.7372.

Project Limits

Existing lane configuration

Proposed lane configuration (typical)

The design on the upper portion of Farm Hill Boulevard maintains two lanes of uphill traffic.
