

**Redwood Shores Lagoon  
November 2018  
Monthly Water Quality Monitoring Report**

**Prepared for**

**Redwood City  
Public Works Services Department  
1400 Broadway  
Redwood City, CA 94063-2594**

**Prepared by**

**Clean Lakes, Inc.  
P. O. Box 3186  
Martinez, CA 94553**

**December 2018**

# CLEAN LAKES INC.

**RESULTS** - Water quality results for each site is provided below in Table format for 2018 to allow comparison of results from month to month.

## SITE R-1

				Fecal		Dissolved						
	Ortho		Fecal	Coliform	Water	Oxygen	DO		PH	PH

12.18					5		6.5	8.5		

**NUTRIENTS** – Orthophosphate as P (ORP) was detected at every site in a range between 0.15 and 0.32 mg/l. The lowest site for ORP was at R-1 measuring 0.15 mg/l, while the highest site R-4 measured 0.32 mg/l. ORP concentrations decreased or stayed the same in all five sites, in comparison to October. Nitrate as N was below the detection limit at all sites in November.

Phosphorus and nitrogen are essential nutrients for the plants and animals that make up the aquatic food web. Since phosphorus is the nutrient in short supply in most fresh waters, even a modest increase in phosphorus can, under the right conditions, set off a whole chain of undesirable events in a stream including accelerated plant growth, algae blooms, low dissolved oxygen, and the death of certain fish, invertebrates, and other aquatic animals.

There are many sources of phosphorus, both natural and human. These include soil and rocks, wastewater treatment plants, runoff from fertilized lawns and cropland, failing septic systems, runoff from animal manure storage areas, disturbed land areas, drained wetlands, water treatment, and commercial cleaning preparations.

Inorganic nitrate as N should be less than 0.3 mg/L to avoid algal blooms. Excessive concentrations of nitrate in lakes and streams greater than about 5 milligrams per liter (measured as nitrogen), depending on the water body, can cause excessive growth of algae and other plants, leading to accelerated eutrophication or "aging" of lakes, and occasional loss of dissolved oxygen. Animals and humans cannot use inorganic forms of nitrogen.

Since phosphorus is often scarce in freshwater ecosystems, it is typically a limiting nutrient, meaning that it limits the amount of life the system can sustain. When humans add phosphate-rich sewage or agricultural runoff, algae growth may no longer be limited by the scarcity of phosphorus in its environment and may grow out of control. In order to control algae growth, the EPA recommends that phosphate levels not exceed 0.05 milligrams per liter for streams discharging into lakes or reservoirs, 0.1 milligrams per liter for lakes and reservoirs, and 0.1 milligrams per liter for other streams and rivers.

**FECAL COLIFORM** - The fecal coliform levels were below the detection limit in both sites R-1 and R-2. Coliform levels decreased in both sites, in comparison to October. Fecal coliform levels did not exceed the established limits. Single sample results over 1,000 MPN/100mL are considered to exceed limits.

**GENERAL WATER QUALITY ANALYSIS** – The Dissolved Oxygen (DO) levels in November exceeded the 5.0 mg/l threshold in all 5 sites. DO was highest at Site R-1 (10.25 mg/l) and lowest at Site R-4 (5.33 mg/l). The water temperature decreased at all five sites in November, with temperatures ranging from 15.8 to 19.6 C. PH measurements were within the limit at every site, ranging from 7.5 to 7.9. Salinity measurements varied from approximately 29.79 ppt. to a maximum of 33.47 ppt. Turbidity was within limits and varied between 3.27 and 29.1 NTU. It was noted in the field data sheet that algae and aquatic plant life were present during the time of sampling in R-1 and R-2. It was also noted that the pumps were running at the time of sampling in sites R-4 and R-5.

# Field Results

Redwood Shores Lagoon  
Monthly Water Quality Monitoring Field Data

Date: 11/15/18 Name(s) of Field Personnel: Cory Pattaned

Weather Conditions \_\_\_\_\_ Air Temperature: 60°

Wind Conditions: Light / Moderate / High Percent Cloud: 50%

**Field Measurements**

Sampling Station	Time	Maximum Depth (ft)	Sample Depth (ft)	Water Temp°C	Dis. Oxy. Mg/l	pH units	Salinity ppt	Turbidity NTU
R-1	12:34	6'	3'	19.6	10.25	7.9	29.79	3.27
R-2	12:13	6'	3'	18.8	6.18	7.5	30.65	17.0
R-3	11:53	3'	2'	16.2	10.21	<del>7.6</del>	33.31	24.7
R-4	11:10	6'	3'	16.3	5.33	7.5	31.49	18.2
R-5	11:32	6'	3'	15.8	8.65	7.6	33.47	29.1

Samples for the following test will be collected for laboratory analyses

- Nitrate-N
- Ortho-P04-P (preservative required, do not rinse bottle)
- Fecal Coliform Bacteria (R-1 and R-2 only)

Notes & Observations about floatables, oil & grease, films, scum water discoloration, algae, aquatic plant growth and presence of dead wildlife:

R-1- ALGAE, AQUATIC PLANT LIFE PRESENT AT SAMPLE SITE

R-2- ALGAE, AQUATIC PLANT LIFE PRESENT AT SAMPLE SITE

R-3- \_\_\_\_\_

R-4- PUMPS RUNNING AT TIME OF SAMPLE

R-5- PUMPS RUNNING AT TIME OF SAMPLE
